VIRASYA

Where stories transform into heritage, and where heritage turns into experience.

The Problem

A significant part of India's cultural heritage lives beyond monuments, museums, and written archives. It exists in family stories, folk traditions, recipes, songs, crafts, rituals, local histories, and the everyday knowledge passed from one generation to another. Much of this knowledge is never formally documented. As people migrate, traditions change, and older generations pass on, valuable memories and practices risk being lost. Existing digital storage tools may preserve files, but they do not necessarily organise the stories or retain the people, places, and cultural context connected to them.

Our Idea

VIRASYA is a digital heritage preservation platform that gives individuals and communities a space to record, preserve, organise, and discover their cultural knowledge. It puts the people who carry this knowledge at the centre, allowing them to contribute oral histories, family memories, photographs, videos, written stories, traditional practices, and other cultural records. We aim to begin with communities in Odisha and gradually expand to other parts of India.

How VIRASYA Solves the Problem

Instead of letting cultural knowledge remain scattered across personal devices or disappear with the people who hold it, VIRASYA brings contributions together as organised digital records. The original audio, video, images, or text remains connected to each record, helping preserve its authenticity and source. AI-assisted processing can make contributions easier to document and discover through transcription, text processing, categorisation, and search. Contributors can review the information and choose whether a record remains private, is shared with family or a community, or is made public. This keeps preservation accessible while respecting ownership, consent, and cultural context.

How It Works

CAPTURE → PROCESS → ORGANISE → REVIEW → PRESERVE → EXPLORE

Users record or upload cultural material such as audio, video, photographs, or text. VIRASYA helps process and organise the contribution into a digital heritage record, linking the original source with relevant details such as its story, language, people, place, and tradition. The contributor reviews the record and sets its access permissions. The preserved records can then be explored and discovered by others, while the original source material remains available as the foundation of the record.

Our Vision

VIRASYA aims to make cultural preservation a community-led, everyday activity - not something limited to formal institutions. By helping people preserve their own stories and making those stories easier to discover and learn from, we hope to keep the knowledge, voices, and traditions of today connected to future generations.

VIRASYA - Preserve what matters. Experience what lasts.
